Subject: MAG Recirculating Pump

SCOPE
All Multiplex model 2803, 11M, 44, & 50, remote refrigeration soda equipment, circulating pump & motor assembly.

SYMPTOM:
Water leaks from circulating pump. Leaks are most often from the weep hole on the pump housing. The leak is a result of the degradation of the pump shaft seal.

ACTIONS:
Multiplex has a new circulating motor and pump assembly. This assembly has a magnetic drive pump to eliminate the seals that can leak on a shaft-driven pump and is now standard on all new Multiplex Icecore 44G, 44HC, and 50G equipment.

The MAG 215 circulation pump retrofit kit, part number 020003211 is available and will work with either 115 volt or 220 volt applications. The kit contains a dual voltage motor, 115 volt & 230 volt wire harness, a magnetic drive pump, bolts, bracket and instructions to install in legacy equipment.

FURTHER ACTIONS
Contact Manitowoc Beverage Systems Service Sellersburg Indiana if you have any questions or concerns: 1-800-367-4233.

Important
This pump and motor should not be used as a carbonator pump & motor, or a glycol circulating pump and motor for the Beermaster series.
