Service Bulletin

Subject: Chiller 120V Carbonator/Circulator Motor

SCOPE: MODEL 11, 2803, 75, 150

SYMPTOM
Incorrect wiring causes motor to overheat.

ACTION
1. Turn unit off and disconnect plug from outlet.
2. Remove motor cover to access wiring.
3. Check carbonator/circulator motor wiring on BOTH motors. Locate white wire. If white wire is connected to J4, proceed to next step.
4. Disconnect white wire from J4 and connect to J2. Do this for both motors.
5. Replace motor covers.
6. Plug unit in and power unit on.

FURTHER ACTIONS
Contact Welbilt KitchenCare if you have any questions or concerns: 1-844-724-CARE (2273).
