Subject: Circulating Temperature Transducer Nut

SCOPE
Multiplex Icecore 44G & 50G Beverage Chillers

SYMPTOM:
The nut that holds the circulating temperature transducer in place is not tightened properly. It is possible for the transducer to come out of the seal and create a leak.

ACTIONS:
Open the top cover to gain access to the water bath where the Circulating Temperature Transducer is located. Tighten the nut to 25 in-lbs by using a 9/16” wrench on the large nut while holding the smaller in place with a 7/16” wrench.

FURTHER ACTIONS
Contact Manitowoc Beverage Systems Service Sellersburg Indiana if you have any questions or concerns: 1-800-367-4233.

LOOSE NUT
May cause leaking or transducer to be forced from fitting (Shown Above).

TIGHT NUT
Properly tightened nut will not leak.
